## (54) INTERRUPTION PROCESSING SYSTEM

**(57)Abstract:**

**PURPOSE:** To reduce the saving/restoring overhead of a context at the time of interruption processing while suppressing the increment of hardwares by storing the context of a part of an interruption level defined by a processor in the processor.

**CONSTITUTION:** When an instruction circuit means 18 instructs a frame number selection control means 27 and an instruction execution unit 1 to restore a context from a memory area, the means 27 instructs a selection means 25 to select a frame number for a system mode. A program for saving/restoring contexts extracts a context from the memory in accordance with a context storing address 21 and loads the context. Consequently, overhead saving/restoring the context at the time of generating an interruption can be removed.

## LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
